

Calculating your GPA

- Filter your courses: Select only courses completed at the Grade 10, 11, or 12 level that you have completed and already appear on your transcript. Courses in progress do not count. Courses taken at a Grade 9 level, even if taken in tenth grade, do not count.
- Calculate points for each course: Multiply the final grade you achieved by the number of credits the course was worth.
- Find your total grade points: Add all of those results together.
- Divide by total credits: Divide your total grade points by the total number of credits across all eligible courses.

Weighted Average = Total Grade Points / Total Credits

Example:

If you took a 2-credit Grade 11 course and achieved 95%, and a 1-credit Grade 12 course and achieved 90%:

- Grade 11 Course: $95\% \times 2 \text{ credits} = 190 \text{ points}$
 - Grade 12 Course: $90\% \times 1 \text{ credit} = 90 \text{ points}$
 - Total Grade Points: $190 + 90 = 280 \text{ points}$
 - Total Credits: $2 + 1 = 3 \text{ credits}$
- GPA: $280 \div 3 = 93.33\%$

Please input your GPA up to two decimal places. For CEGEP students, your school can provide your R-score.
